

Leak Detector.

AR Receiver Systems CL-105/106 Electromagnetic Leak Detector.

A convenient and effective means of testing the electromagnetic shielding at seams, doors and filter connections.

Model CL-105/106 is a portable unit, with a convenient carrying case, that includes a leak detection system transmitter and a sniffer/receiver.

The transmitter is connected via feedwire to opposite corners of the enclosure, and will transmit an AC current across the metallic surface. If a poor seam exists, a signal will be detected when scanning with the receiver pick-up probe.
